Project Design Phase

Proposed Solution Template

Date	01-10-2026	Team ID	SWTID-2026-5415
Project Name	Import Data Using Transform Maps (Spreadsheet)	Maximum Marks	2 Marks

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Import spreadsheet data into ServiceNow accurately, transform source columns into target fields, relate Employee data and validate access.
2	Idea / Solution description	Use Import Sets / Load Data to receive the spreadsheet, a Transform Map to map and transform fields, a target table to store records, and reference/security configuration for verification.
3	Novelty / Uniqueness	The solution combines spreadsheet ingestion, Transform Map processing, Employee reference/dot-walking and access validation in one ServiceNow workflow.
4	Social Impact / Customer Satisfaction	For the intended internal users, the workflow improves consistency and makes the data and access process easier to verify.
5	Business Model (Revenue Model)	This is a project implementation; no revenue model is specified.
6	Scalability of the Solution	The same import and mapping pattern can be reused for additional spreadsheet batches and target records, subject to actual instance limits.

Proposed Workflow

Spreadsheet → Import Set → Transform Map → Target Table → Employee Reference → Department (dot-walking) → Role/ACL → Impersonation
